Daily user guidance

Repair Shop Management System

Version 1.0 | 20 October 2026

Step 12 follow-up handover

Software verification complete for the recorded test scope.
Business acceptance and operational configuration items remain pending.

Daily user guidance

Start and sign in

Ask the system operator to start MySQL and the Laravel application. Open http://127.0.0.1:8000/login on the same computer, or the address provided by your administrator. Sign in with your assigned username and password. Email is not the login identifier. Menu visibility follows your permissions. Contact an administrator if access is missing; do not share another employee's account.

Receive an appliance

1. Search Customers by name, mobile or customer reference before registering another record.
2. Open Repair Receipts and register the customer, receiving employee, unique manual job number, appliance and reported fault.
3. Record accessories, visible damage and special instructions accurately. Enter an advance only if money was actually received and your account is authorized.
4. Save once. The receiving record, job and job card are created together. Open the saved record before retrying after a connection interruption.
5. Print the A5 customer receipt and A6 job card, or use their PDF actions. Reprints are marked duplicates.

Repair, bill and collect

1. An authorized manager assigns the job. Technicians work on their assigned jobs and record inspection, repair details and status.
2. Where a quotation is used, prepare it and record the authorized approval decision before issuing parts. Approval transfers the agreed selling charges to the job.
3. Request parts, then have an authorized stock issuer issue them. A request alone does not deduct stock.
4. For an unquoted, unbilled job, authorized billing staff enter the labour selling charge. Actual labour cost and customer selling charge are separate values.
5. Prepare and issue the invoice for eligible jobs belonging to the same customer. Verify totals and already recorded advances.
6. Receive the remaining payment, choosing cash, bank transfer or cheque and supplying required references. Partial collections are supported; never enter an advance again as a new receipt.
7. Check the invoice balance, print the payment receipt and record completion/delivery through the job workflow.

Sell over the counter

Open POS, scan or search a part, confirm quantity and location, and review the cart. Cash checkout records tender and change but posts only the sale total. Bank/cheque sales remain pending until an authorized

manager verifies payment; pending sales do not post stock. Discounts and returns require their own permissions. Use the recorded sale when printing or processing a return.

Close the day

Review receipts, collections, outstanding credit, POS transactions and stock exceptions with an authorized manager. Investigate differences through document histories. Do not delete financial records to correct a mistake. Sign out. Ask the administrator to verify backup success; a configured schedule or a local backup does not prove that a Google Drive copy exists.

Help and unfinished acceptance

Read the User Manual for detailed workflows and the Administrator Manual for setup and recovery. Record the document reference, action and visible error when requesting help, without sharing passwords. Physical printer/scanner acceptance, owner UAT, an approved operational backup destination and purchase-wide discount/freight cost allocation are pending. Google Drive is intentionally unconfigured.
